

# Lemelson ILLINOIS

STUDENT PRIZE

*Finalist* 2009

## HAN WUITHEN

*Graduate Student  
Electrical & Computer  
Engineering  
College of Engineering*

Han Wui, in conjunction with Professor Milton Feng and Professor Nick Holonyak, Jr., co-invented an ultra-linear laser source that will potentially introduce a four-fold reduction in the complexity of present state-of-the-art solutions. This invention is expected to generate quantum leaps in photonic integrated technologies enabling faster and cheaper network and computer technologies which will increase data speeds by more than ten-fold.
