STUDENT PRIZE

Finalist 2009

MARTINPAGE

*Graduate Student
Civil & Environmental
Engineering
College of Engineering*

Martin has taken the initiative to develop water treatment systems for people in developing regions that do not have access to safe drinking water. Martin's main contribution, SoChlor, combines solar and monochloramine disinfection, which makes possible the rapid inactivation of viruses in waters containing ammonia, making SoChlor an excellent option for improving drinking water quality in developing regions.
